

Seaforestation Action

Seaforest Cascais

Assessing the potential for seaforestation in Cascais

In collaboration with the Câmara Municipal de Cascais, we are assessing the potential to restore seaweed forests along the coastline of Cascais. Through a combination of scientific research, citizen science and community engagement, we envision that this initial feasibility project will provide the first step towards enhancing the health and value of Cascais' Blue Front Yard. The project was developed to meet four main objectives:

- 1 Assess the historic and current status of seaweed populations;
- 2 Identify potential environmental stressors that inhibit the natural recovery of seaweeds;
- 3 Test best planting / seeding techniques for endemic seaweeds;
- 4 Develop a plan for future seaforestation activities in Cascais.
